

The Significance Forum

All aspects of karst features contribute to or by themselves can make a feature significant. For example, any feature with archaeological items relating to our indigenous peoples are significant features. Or a series of sinks near a cave in close proximity to a community, the recreational and site visit potential can contribute to the sinks significance. These can be determined by the existing guides and handbooks. However what are the needs of today?

User needs are also a critical component in determining significance, how else can we know what a microbiologist needs are, unless their is a forum to voice. A central place where Land Managers and Karst Specialists can go for understanding the current and future needs and manage accordingly. Go back to the main page and click on each of the eggs to see what is currently listed.
